## МОЛБА

НАУЧНОМ ВЕЋУ ИНСТИТУТА

### Предмет: Захтев за покретање поступка за избор у звање

У складу са одредбама Закона о науци и истраживањима, ("Службени гласник Републике Србије", бр. 49/2019) као и Правилнику о стицању научних и истраживачких звања ("Службени гласник Републике Србије", бр. 159/2020 и 14/2023) молим да покренете поступак за мој избор у звање **виши научни сарадник**.

У прилогу достављам:

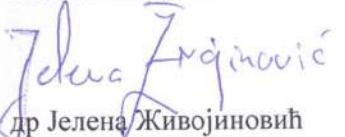

- Биографију
- Библиографију
- Листу цитата – Извештај о цитирањости (*Scopus* и *Web of Science*)
- Копију дипломе о стеченом звању доктора наука
- Копију одлуке о стицању претходног научног звања (научни сарадник)
- Доказе о испуњавању квалитативних услова

Ради покретања поступка за избор у звање виши научни сарадник, предлажем следећу комисију:

- др Дарко Косановић, научни саветник, Институт техничких наука САНУ, председник комисије
- др Владимир Павловић, редовни професор, Польопривредни факултет, Универзитет у Београду, члан
- др Нина Обрадовић, научни саветник, Институт техничких наука САНУ, члан

У Београду,  
08.01.2025. године

Подносилац молбе:

  
др Јелена Ђивојиновић  
Научни сарадник ИТН САНУ

## **ПРИЛОГ 1**

### **БИОГРАФИЈА – др Јелена Живојиновић**

Др Јелена Живојиновић је рођена 19. марта 1982. године у Београду, Србија. Завршила је средњу медицинску школу у Београду, смер фармацеутски техничар. Основне студије на факултету за Физичку хемију, Универзитет у Београду, завршила је 2011. године са називом дипломског рада: "ЕПР детекција биомаркера за АЛС". Докторске академске студије уписала је 2011. године на Технолошко-металуршком факултету, Универзитет у Београду, на смеру Инжењерство материјала под менторством др Ђорђа Јанаћковића, редовног професора на Катедри за неорганску хемијску технологију. Докторске академске студије је завршила одбраном докторске дисертације под називом "Утицај механичке активације на структуру и својства стронцијум-титанатне керамике", 4. јуна 2020. године.

Од 1. новембра 2011. године запослена је у Институту техничких наука САНУ као истраживач приправник, од 10. октобра 2012. год. као истраживач сарадник, реизбор у звање истраживач сарадник је био 25. априла 2017. год., а од 30. јула 2020. год. је изабрана у звање научни сарадник, по одлуци Министарства за просвету, науку и технолошки развој Републике Србије (бр. 660-01-00002/2020-14/47 од 06.08.2020. године). Била је ангажована на пројектима основних истраживања из области хемије које је финансирало Министарство науке, технолошког развоја и иновација Републике Србије и налазила се у категорији А4 истраживача од 2011. године. Аутор је и коаутор више од 30 научних радова презентованих на међународним конференцијама и публикованих у међународним научним часописима. Хиршов индекс др Јелене Живојиновић је 5, према базама података *Web of Science* и *Scopus* укупан број цитата је 71, од којих су 43 хетероцитати.

Области интересовања су јој наноструктурни материјали, синтеза и карактеризација материјала, технологија прахова, керамички материјали, термална анализа и синтеровање материјала, проводници и полупроводници, фероелектрици и мултифериоци, оксидна керамика, обрада и својства керамике високих перформанси. Научно истраживачка делатност др Јелене Живојиновић орјентисана је према технологији прахова, синтези, карактеризацији структуре и функционалних својстава електрокерамичких материјала.

Др Јелена Живојиновић је у периоду од 01.01.2017. до 31.12.2018. руководила пројектним задатком под називом "Анализа утицаја механичке активације и допирања на еволуцију структуре и функционална својства стронцијум титанатне керамике" у оквиру пројекта ОИ172057 са називом "Усмерена синтеза, структура и својства мултифункционалних материјала". Руководилац пројекта је био др Владимир Павловић, редовни професор на Пољопривредном факултету, Универзитет у Београду, а под покровитељством Министарства просвете, науке и технолошког развоја Републике Србије.

У периоду од 1.01.2021. до 31.12.2022. године била је ангажована на двогодишњем интернационалном билатералном пројекту међуакадемске сарадње између Словачке академије наука и Српске академије наука и уметности под насловом

"Припрема BZT керамике конвенционалном и импулсном техником синтеровања електричне струје" под руководством др Дарка Косановића. У оквиру овог пројекта др Јелена Живојиновић је била руководилац пројектног задатка под називом: "Оптимизација температуре синтеровања у циљу добијања најбољих електричних својства BZT керамике".

Одржала је предавање по позиву на међународној конференцији: *CNN Tech International Conference of Experimental and Numerical Investigations and New Technologies, Belgrade, June 24–27<sup>nd</sup> 2024*. Такође, одржала је усмено предавање на осмој међународној конференцији о грађевинским материјалима и инжењерству материјала (*ICBMM 2024, Madrid, Spain, September 10-12<sup>nd</sup>*) и на једанаестој међународној конференцији Српског керамичког друштва (ACA XI, 18-20 септембар 2023. године, САНУ).

Поред научно-истраживачког рада др Јелена Живојиновић је као члан организационог и научног одбора учествовала у реализацији више међународних конференција у области нових керамичких материјала и њихових примена. Председавала је секцијом "Основна керамика и синтеровање" на једанаестој међународној конференцији Српског керамичарског друштва "Напредна керамика и примена" - ACA XI, која је одржана од 18 до 20. септембра 2023. године у Српској академији наука и уметности у Београду.

Др Јелена Живојиновић је члан организационог одбора међународне конференције *Advanced Ceramics and Applications Conference: New Frontiers in Multifunctional Material Science and Processing* и члан научног одбора међународне конференције експерименталних и нумеричких истраживања и нових технологија (*CNN Tech-International Conference of Experimental and Numerical Investigations and New Technologies*).

Др Јелена Живојиновић је активан члан Српског керамичког друштва и Америчког керамичког друштва.

Такође је рецензент међународних часописа изузетних вредности: *Science of Sintering* и *Ceramics International*.

Стручним и саветодавним ангажманом др Јелена Живојиновић учествовала је у изради докторске дисертације Адријане Пелеш Тадић одбрањеној 2020. год. на Универзитету у Београду-Физички факултет. Својим ангажманом на постдипломским студијама младе докторандице осим захвалнице у предговору докторске дисертације сведочи и заједничка публикација на међународној конференцији чији је коаутор и др Јелена Живојиновић.

### Invitation Letter

#### International Conference: „International Conference of Experimental and Numerical Investigations and New Technologies“ CNN TECH 2024

Dear Jelena Zivojinovic,

We are pleased to invite you to the “International Conference of Experimental and Numerical Investigations and New Technologies, CNN Tech 2024” scheduled from 24-27 June 2024 in Belgrade, Serbia. This Conference will be a joint effort of the University of Belgrade, Faculty of Mechanical Engineering, Innovation Center of Faculty of Mechanical Engineering and Center for Business Trainings. This Conference will examine research and development both locally and internationally, and the Conference deliberations will be on the following themes: Mechanical Engineering, Materials Science, Chemical and Process Engineering, Experimental Techniques, Numerical Methods and New Technologies.

It is an honor to invite you to participate at CNN Tech 2024 Conference as invited lecturer. Taking into consideration your outstanding scientific achievements, we believe that your contribution to the Conference topic will be very beneficial.

We look forward to a positive confirmation.

Yours sincerely,

Dr Nenad Mitrovic, Full Professor, Chairman

### Abstract

*Fe<sub>2</sub>O<sub>3</sub>/SrTiO<sub>3</sub> activated ceramics have been prepared via solid-state method to investigate how doping with various amounts of iron influences the microstructural and dielectrical properties of SrTiO<sub>3</sub>. These properties were examined by X-Ray diffraction analysis (XRD) and Scanning electron microscopy (SEM). A solid-state method was used for the preparation of mechanically activated (10, 30 and 120 min) Fe-doped SrTiO<sub>3</sub> ceramics with various iron(III) oxide (Fe<sub>2</sub>O<sub>3</sub>) weight percentages (1.5, 3 and 6 wt%). SEM image of the Fe-doped SrTiO<sub>3</sub> ceramics showed that depending on the time of mechanical activation, a more or less porous structure is obtained. The dielectric permittivity of the material was investigated in a function of frequencies at different temperatures. The obtained results indicate that the combination of the presence of iron(III) oxide as a dopant and mechanical activation have an important influence on the dielectric properties of SrTiO<sub>3</sub> ceramics. It was noticed that the combination of doping and mechanical activation makes the Fe<sub>2</sub>O<sub>3</sub>/SrTiO<sub>3</sub> ceramic sample a good choice for further dielectric research.*

### Keywords

Fe-doped SrTiO<sub>3</sub>ceramics, mechanical activation, structural and dielectrical properties.

6. Click [Submit Recommendation] (in the Actions column)
7. Choose the appropriate recommendation term for the paper e.g. Accept, Revise, Reject
8. Rate the paper by clicking on the appropriate check boxes in the Manuscript Review form underneath
9. Insert your confidential comments to the author. If the English language is not adequate, point it out to him. (Your name will not be released to the author)
10. If you want to make corrections in the manuscript, you have two choices:
  - i) download the paper and save it in your computer, make your corrections using the tools of Adobe Acrobat and attach the file to your reply;  
or
  - ii) print the paper, make the corrections by hand, scan the corrected pages and attach the file to your reply;
11. Click [Proceed]
12. Click [Edit Review] if you wish to make further changes or [Submit Review to Journal Office] to confirm
13. Click [OK] to confirm your overall recommendation.

Thank you in advance for your timely cooperation and for your contribution to the success of Ceramics International.

As a reviewer you are entitled to complimentary access to ScienceDirect and Scopus for 30 days. Your 30-day access can be activated in your "Pending Assignments" page in EM and you have 6 months to activate it. From the Scopus search bar on your "Pending Assignments" page you can access Scopus directly and from there seamlessly access full text articles on ScienceDirect. You can also access Scopus directly via [www.scopus.com/reviewers](http://www.scopus.com/reviewers), using your EM Username and Password.

As a reviewer you are entitled to complimentary access to ScienceDirect and Scopus. This 30-day access can be activated in the [Rewards] section of your profile in Reviewer Hub ([reviewerhub.elsevier.com](http://reviewerhub.elsevier.com)) and you have six months to activate it.

Ms. Ref. No.: CERI-D-24-14882

Title: Influence of CuO/Al<sub>2</sub>O<sub>3</sub> Secondary Sintering on Dielectric Properties of SrTiO<sub>3</sub> Ceramics  
Ceramics International

Dear Dr Jelena Zivojinovic,

Thank you for taking the time to review the above-referenced manuscript. You can access your comments and the decision letter when it becomes available.

To access your comments and the decision letter, please do the following:

1. Go to this URL: <https://www.editorialmanager.com/ceri/>
2. Enter your login details
3. Click [Reviewer Login]

Thank you again for sharing your time and expertise.

Also, please visit our reviewer recognition platform <https://www.reviewerrecognition.elsevier.com/> to collect your reviewer certificate and to benefit from discounts on Elsevier products and services.

As a token of appreciation, we would like to provide you with a review recognition certificate on Elsevier Reviewer Hub ([reviewerhub.elsevier.com](http://reviewerhub.elsevier.com)). Through the Elsevier Reviewer Hub, you can also keep track of all your reviewing activities for this and other Elsevier journals on Editorial Manager.

If you have not yet activated your 30 day complimentary access to ScienceDirect and Scopus, you can still do so via the [Rewards] section of your profile in Reviewer Hub ([reviewerhub.elsevier.com](http://reviewerhub.elsevier.com)). You can always claim your 30-day access period later, however, please be aware that the access link will expire six months after you have accepted to review.

Yours sincerely,

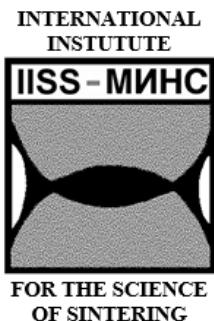

Reginaldo Muccillo, Dr.  
Associate Editor  
Ceramics International

Dear colleagues and friends,

We have great pleasure to welcome you to the Advanced Ceramic and Application XI Conference organized by the Serbian Ceramic Society in cooperation with the Institute of Technical Sciences of SASA, Institute of Chemistry Technology and Metallurgy, Institute for Technology of Nuclear and Other Raw Mineral Materials and Institute for Testing of Materials.

It is nice to host you here in Belgrade in person. We are very proud that we succeeded in bringing the scientific community together again and fostering the networking and social interactions around an interesting program on emerging advanced ceramic topics. The chosen topics cover contributions from fundamental theoretical research in advanced ceramics, computer-aided design and modeling of new ceramics products, manufacturing of nano-ceramic devices, developing of multifunctional ceramic processing routes, etc.

Traditionally, ACA Conferences gather leading researchers, engineers, specialists, professors and PhD students trying to emphasize the key achievements which will enable the widespread use of the advanced ceramics products in the High-Tech industry, renewable energy utilization, environmental efficiency, security, space technology, cultural heritage, etc.

Serbian Ceramic Society was initiated in 1995/1996 and fully registered in 1997 as Yugoslav Ceramic Society, being strongly supported by American Ceramic Society. Since 2009, it has continued as the Serbian Ceramic Society in accordance with Serbian law procedure. Serbian Ceramic Society is almost the only one Ceramic Society in South-East Europe, with members from more than 20 Institutes and Universities, active in 9 sessions..

Dr. Nina Obradović  
President of the Serbian Ceramic Society

Dr. Suzana Filipović  
President of the General Assembly of the  
Serbian Ceramic Society

#### Conference Topics

- Basic Ceramic Science & Sintering
- Nano-, Opto- & Bio-ceramics
- Modeling & Simulation
- Glass and Electro Ceramics
- Electrochemistry & Catalysis
- Refractory, Cements & Clays
- Renewable Energy & Composites
- Amorphous & Magnetic Ceramics
- Heritage, Art & Design

## 6.5.2.

Thank you for renewing your membership in The American Ceramic Society,  
Jelena Aca!

ACerS is the premier global membership organization for the technical ceramics and glass community. We hope you'll make ACerS your professional home for many years to come, as it has been for thousands of other ceramic and glass professionals and students for more than 120 years. Your ACerS ID is # 2978498.

**As a reminder, get and stay connected...**

Your login at [ceramics.org](http://ceramics.org) will provide access to our members-only content, which includes new [online member communities](#), [The American Ceramic Society Bulletin](#), [four high-impact peer reviewed journals](#), and more.

**If you have not logged in for a while, please follow these directions:**

1. Go to [www.ceramics.org](http://www.ceramics.org).
2. Click on "Log In" on the top right corner of the screen
3. Click on "Reset your password"
4. Enter your email address and click on the "Reset your password" button
5. Open your email and click on the Reset my Password link within the email
6. Once you have reset your password, start browsing, buying and downloading

**So what next?**

Once logged in you are ready to:

1. Update your member profile (Personal Snapshot) so we can best serve you
2. Explore [member benefits](#) to get the most value from membership
3. Join [divisions](#) to meet others with similar interests as you
4. See if there is a [section](#) or [chapter](#) near you to meet members in your area

If you have any questions about logging in or any other member benefits, please don't hesitate to contact [me](#) or [Customer Service](#) at 614-890-4700 or 866-721-3322 (toll-free).

Thank you for your continued membership!

Sincerely,

Andrea Ross  
Meetings, Marketing and Membership Director

***For technical ceramics and glass professionals, membership in ACerS will***

Iron-doped strontium-titanate ( $\text{SrTiO}_3$ ) powders with various iron(III) oxide ( $\text{Fe}_2\text{O}_3$ ) weight percentages (1.5, 3 and 6 wt%) were prepared by a solid-state method in the presence of mechanical activation (10, 30 and 120 min). A systematic investigation by XRD, SEM and Raman spectroscopy has been undertaken to evaluate the role of dopant on the microstructural and morphological study of the perovskite oxide obtained. The optical properties of the different iron-doped and activated  $\text{Fe-SrTiO}_3$  powders have been also evaluated. The results demonstrated that Fe has been substituted into the lattice and surface layers of particles of  $\text{SrTiO}_3$  powders and the absorption edge shifted to higher wavelength values with increasing activation time and dopant weight percentage. The lowest value of the band gap ( $E_g=3.20$  eV) was registered for the longest activation (120 min) and the highest weight percentage of dopant (6 wt%). Combining doping with mechanical activation, led to lower values of  $E_g$  and that fact could be used in subsequent studies to make  $\text{Fe-SrTiO}_3$  more suitable photocatalysts.

**Abstract-** Fe<sub>2</sub>O<sub>3</sub>/SrTiO<sub>3</sub> composite powders have been prepared via mechanical activation to investigate how doping with various amounts of Fe<sup>3+</sup> influences the structural, morphological and optical properties of SrTiO<sub>3</sub>. These properties were examined by X-Ray diffraction analysis (XRD), Raman spectroscopy, Scanning electron microscopy (SEM) and Diffuse reflectance spectroscopy (DRS). The results showed that the Fe<sub>2</sub>O<sub>3</sub>/SrTiO<sub>3</sub> composite powders with optimum proportion have a decreasing trend of band gap with increasing activation times and dopant weight percentages. The SEM image of the composite powders showed that SrTiO<sub>3</sub> and Fe<sub>2</sub>O<sub>3</sub> particles contacted well. Further investigation showed that the combination of doping and mechanical activation led to lower values of  $E_g$  values and that fact could be used in later studies to make Fe<sub>2</sub>O<sub>3</sub>/SrTiO<sub>3</sub> more suitable photocatalysts.

**Keywords-** Fe-doped SrTiO<sub>3</sub> powders, mechanical activation, structural and optical properties.

## 6.7. Потврда о учешћу на пројектним задацима

### 6.7.1.

Универзитет у Београду  
Пољопривредни факултет  
Немањина 6, 11080  
Београд, Земун  
Србија

#### Потврда о руковођењу пројектним задатком др Јелена Живојиновић

Овим потврђујем да је у периоду од 01.01.2017. до 31.12.2018. године у оквиру пројекта ОИ172057 -"Усмерена синтеза, структура и својства мултифункционалних материјала", финансираног од стране Министарства за просвету, науку и технолошки развој Републике Србије, др Јелена Живојиновић била **руководилац пројектног задатка**: "Анализа утицаја механичке активације и допирања на еволуцију структуре и функционална својства стронцијум титанатне керамике".

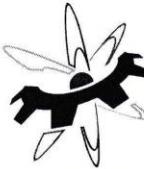

Истраживачке активности др Јелене Живојиновић су се односиле на руковођење истраживањима која су била у области развоја процеса контролисане синтезе недопираних и допираних електрокерамика (оксидни систем на бази стронцијума и титанијума, механичка активација, пресовање, синтеровање, проучавање еволуције уструктури и њен утицај на електричне и магнетне особине добијене керамике). Добијени резултати и анализе истраживања су указала на битан допринос у разумевању међусобне повезаности структуре и својства код механички активиране недопиране и допиране електрокерамике.

Београд, 18.12.2024. г.

С поштовањем,

Проф. др Владимир Павловић  
Редовни професор Пољопривредног факултета,  
Универзитета у Београду,  
Руководилац пројекта ОИ172057

Адриана П. Пелеш Тадић

**ПОЛИМЕРНИ НАНОКОМПОЗИТИ НА БАЗИ  
PVDF И МЕХАНИЧКИ АКТИВИРАНОГ ПРАХА  
ZnO, КАРАКТЕРИЗАЦИЈА И ПРИМЕНА У МЕМС  
ТЕХНОЛОГИЈАМА**

Докторска дисертација

Београд, 2020.

## Захвалница

Ова докторска дисертација урађена је у оквиру научног пројекта ОИ 172057 „Усмерена синтеза, структура и својства мултифункционалних материјала“ под руководством проф. др Владимира Павловића, редовног професора Пољопривредног факултета Универзитета у Београду, научног саветника у Институту техничких наука САНУ.

У оквиру ове дисертације проучаван је утицај механички активираног праха ZnO, као пуниоца, на својства полимерне матрице на бази PVDF.

Докторска дисертација „Полимерни нанокомпозити на бази PVDF и механички активираног праха ZnO, карактеризација и примена у МЕМС технологијама“ урађена је под руководством проф. др Зорана Николића, ванредног професора Физичког факултета Универзитета у Београду. Овим путем му се захваљујем на помоћи пруженој током изrade ове дисертације.

Посебно се захваљујем др Вери П. Павловић, ванредном професору Машинског факултета Универзитета у Београду, на координирању делом истраживања који се односио на поједине спектроскопске анализе, као и на великој помоћи при снимању, тумачењу и интерпретацији резултата Раманове спектроскопије.

Посебну захвалност дугујем и Академику Зорану Ђурићу (САНУ) и др Ивани Јокић (Универзитет у Београду - ИХТМ) на координирању делом истраживања везаних за МЕМС технологије као и на указаној помоћи и саветима који су ми били од велике помоћи приликом израде ове дисертације.

Широк спектар истраживања као и њихова комплексност, захтевала су примену различитих експерименталних метода. Из тог разлога ова истраживања су обављена у више лабораторија. Зато се овом приликом захваљујем на сарадњи: др Миодрагу Митрићу (ИНН Винча), др Владимиру Ђоковићу (ИНН Винча), др Радовану Дојчиловићу (ИНН Винча), др Обраду Алексићу (институт за мултидисциплинарна истраживања), др Југославу Крстићу (Универзитет у Београду-ИХТМ), др Душици Стојановић (Универзитет у Београду-ТМФ) и др Николи Тасићу (институт за мултидисциплинарна истраживања).

Велику захвалност изражавам својим колегама из Института техничких наука САНУ др Нини Обрадовић, др Лидији Манчић и др Смиљи Марковић.

Проф др Владимиру Павловићу (ИТН САНУ) и др Владимиру Благојевићу се захваљујем на исцрпним дискусијама и саветима који су били од велике користи за израду ове дисертације.

Велику захвалност дугујем драгим колегама и пријатељима др Ненаду Тадићу (Универзитет у Београду-физички факултет), др Дарку Косановићу (ИТН САНУ), Јелени Живојиновић (ИТН САНУ), Јелени Вујанчевић (ИТН САНУ)

Посебну захвалност дугујем својој породици, мајци Снежани, оцу Предрагу и сестри Мариани, супругу Дејану и ћерци Магдалени на неизмерној подршци, бодрењу и пруженој љубави.

results. Results revealed that particles have clustered inner structure and are composed from primary nanounits in form of nanoparticles or nanotubes. Such hierarchically organized particles are expected to have potential application not only in the field of photovoltaics but also in various branches of photocatalysis.

Materials based on ZnO structure have more frequently application as fillers in polymer ceramics nanocomposites. Performances of these materials depends on fillers morphology, surfaces texture and particles size. According to this, in this paper, the authors investigated the influence of mechanical activation of ZnO powder on crystal and micro structure. Commercially available ZnO powder was activated in a planetary ball mill for 2, 5, 10 and 30 minutes. Characterization of such obtained powders was performed using XRD, SEM and Raman spectroscopy. XRD patterns indicated at lowering of peak intensities along with its broadening which is related to partial fragmentation and amorphization. Micrographs show irregularly shaped particles at the beginning and with prolonged milling time, particles gained uniformed distribution, while after 30 minutes of activation agglomerates started forming. The results we got by investigation of dynamical structure by Raman spectroscopy are in correlation with the other results of structures analysis. Results presented here enable further optimization of, polymer nanocomposite based on ZnO and PVDF, making process.

**ZnO/Ag hybrid nanocubes in alginate matrix**

Lidija V. Trandafilović<sup>1</sup>, Radovan Dojčilović<sup>1</sup>, Suzana Dimitrijević-Branković<sup>2</sup>,  
Vladimir Djoković<sup>1</sup>

<sup>1</sup>Vinča Institute of Nuclear Sciences, University of Belgrade, P.O. Box 522, 11001 Belgrade, Serbia

<sup>2</sup>Faculty of Technology and Metallurgy, University of Belgrade, Belgrade, Serbia

Ag/ZnO heterostructure of ZnO nanocubes decorated with spherical Ag nanoparticles were prepared in the presence of alginate biopolymer. It has been shown that nanostructures of two or more distinct components and geometries may exhibit additional properties due to an anisotropic distribution of surface functional groups and charges. The obtained ZnO/Ag nanostructures were characterized by UV-vis absorption and photoluminescence spectroscopy, as well as scanning electron microscopy (SEM) and transmission electron microscopy (TEM). The photocatalytic activity of ZnO/Ag-nanohybrids was significantly improved with respect to the bare ZnO particles. Antimicrobial activities ZnO/Ag-alginate nanocomposites were tested against gram-positive (*S. aureus*) and gram-negative (*E. coli*) types of bacteria.
