НАУЧНОМ ВЕЋУ ИНСТИТУТА

Предмет: Захтев за покретање поступка за избор у научно звање

Молим да, у складу са Законом о научноистраживачкој делатности, Научно веће Института техничких наука САНУ покрене поступак мог избора у звање научни саветник.

У прилогу достављам:

1. Стручну биографију и библиографију.
2. Извештај о цитирањости радова (Scopus и Web of Science).
3. Вредност индикатора и сведочанства о испуњавању квалитетивних критеријума.
4. Одлуку о стицању претходног научног звања виши научни сарадник.

Предлажем чланове комисије за оцену испуњености услова за избор у звање научни саветник у следећем саставу:

1. Др Лидија Манчић, научни саветник Института техничких наука САНУ
2. Др Миодраг Митрић, научни саветник Института за нуклеарне науке Винча, Универзитет у Београду
3. Др Смиља Марковић, научни саветник Института техничких наука САНУ

У Београду,

01.10.2018.

Подносилац захтева

др Драгана Југовић
виши научни сарадник Института техничких наука САНУ

БИОГРАФИЈА

Др Драгана Југовић је рођена 1. 2. 1973. године у Београду. Основну школу и гимназију је завршила у Београду. Дипломирала је на Факултету за физичку хемију Универзитета у Београду 2002. године са темом „*Синтеза и електрохемијске особине $LiMn_2O_4$ као катоде Li-јон акумулатора*“ и стекла звање дипломирани физикохемичар. Магистрирала је на Факултету за физичку хемију Универзитета у Београду 2004. године, са темом „*Карактеризација катодних материјала $LiMn_{2-x}M_xO_4$ ($M = Mn, Cr, Zn$) синтетисаних ултразвучном спреј тиролизом*“ и стекла звање магистар физикохемијских наука. Докторирала је на Факултету за физичку хемију Универзитета у Београду 2008. године, са темом „*Синтеза и карактеризација оксидних катодних материјала за литијумске изворе струје*“ и промовисана у доктора физикохемијских наука.

Истраживачко звање истраживач-сарадник је стекла 2005. године. Научно звање научни сарадник је стекла 4. 3. 2009. године. Научно звање виши научни сарадник је стекла 26. 03. 2014. године. Процедура за избор у звање виши научни сарадник је покренута 11. 10. 2013. године по предлогу број 373/1 Института техничких наука САНУ.

Од 2002. године је запослена у Институту техничких наука САНУ, где је била ангажована на реализацији пројекта финансиралих од стране Министарства за науку Републике Србије:

2002 - 2005 Пројекат ОИ 1431, под називом „*Молекуларно дизајнирање монолитних и композитних материјала*“, руководилац пројекта проф. др Драгољуб Ускоковић, научни саветник Института техничких наука САНУ.

2006 - 2010 Пројекат ОИ 142006, „*Синтеза функционалних материјала са контролисаном структуром на молекуларном и нано нивоу*“, руководилац проф. др Драгољуб Ускоковић, научни саветник Института техничких наука САНУ

Од 2011. је ангажована на пројекту интегралних и интердисциплинарних истраживања из области хемије ИИИ 45004 „*Молекуларно дизајнирање наночестица контролисаних морфолошких и физичко-хемијских карактеристика и функционалних материјала на њиховој основи*“, којег финансира Министарство просвете, науке и технолошког развоја Републике Србије, а руководилац Пројекта је проф. др Драгољуб

Ускоковић. У оквиру овог Пројекта др Југовић је руководилац теме „*Катодни материјали за литијум јонске акумулаторе*“.

2012 - 2013 руководила је пројектом билатералне сарадње између Републике Србије и Републике Словеније под називом „*Високо-енергијски ортосиликатни материјали за литијум јонске акумулаторе*“, евиденциони број 651-03-1251/2012-09/05. Овим пројектом је започета сарадња са Хемијским институтом из Љубљане која је настављена новим билатералним пројектом 2018-2019 „*Развој нових материјала за алкално-јонске батерије*“, на којем је кандидаткиња такође ангажована.

Била је ментор две докторске дисертације одбрањене 01.06.2016. и 31.03.2017. на Факултету за физичку хемију Универзитета у Београду и члан неколико комисија за избор у научна звања пред научним већима Института техничких наука САНУ, Института за нуклеарне науке Винча и Факултета за физичку хемију Универзитета у Београду.

Имала је више позива да одржи предавање од којих су, из финансијских разлога, два реализована на научним скуповима: *International Electric Mobility Conference and Exhibition for Electric Mobility*, одржаном у Љубљани и *Advanced Ceramics and Application VI, New frontiers in Multifunctional Material Science and Processing*, одржаном у Београду.

Учествује у организацији три међународна научна скупа: *YUCOMAT* чији је члан Организационог одбора од 2012. године, а од 2018. године председава Организационим одбором (<http://www.mrs-serbia.org.rs/index.php/organized-by>); *International Symposium on Materials for Energy Storage and Conversion (mESC-IS)* као члан организационог одбора 2017. године (<https://mesc-is2017.org/committees/>), а 2018. године као члан Програмског комитета (https://www.vin.bg.ac.rs/mesc2018/comitees_boards/); *Young Researchers' Conference Materials Sciences and Engineering* као потпредседник Научно-организационог одбора од 2011. године (<http://www.mrs-serbia.org.rs/index.php/scientific-and-organizing-committee>). Такође је председавала секцијама на научним скуповима из области науке о материјалима и електрохемије. Рецензент је међународних часописа изузетних вредности врхунских међународних часописа и домаћег часописа *Техника-Нови материјали* (<http://www.sits.org.rs/include/data/docs2069.pdf>).

Остварила је складну сарадњу са сарадницима Института Јожеф Штефан и Хемијског института из Љубљане у Словенији у истраживањима на својој проблематици коришћењем њихових технолошких ресурса.

Члан је неколико научних друштава: Друштва за истраживање материјала Србије, Српског керамичког друштва и Друштва физикохемичара.

До сада је објавила 28 научних радова, од којих је 24 на ISI листи. У међународним часописима изузетних вредности је објављено 8 радова, 9 у врхунским међународним часописима, 2 у истакнутим међународним часописима, 5 у међународним часописима и 4 у националним часописима. Након избора у звање виши научни сарадник објавила је 10 радова: 5 радова у међународним часописима изузетних вредности на којима је трипут први и кореспондирајући аутор и двапут други аутор; 2 рада у врхунским међународним часописима, на једном од њих је кореспондирајући аутор; 1 у међународном часопису и 2 у националном часопису. Коаутор је регистрованог патента на националном нивоу.

Према цитатним базама *Web of Science* и *Scopus* на дан 22.09.2018. укупна цитираност 24 објављена рада који су са ISI листе је 461: 406 хетероцитата, 29 аутоцитата и 26 коцитата, док је Хиршов индекс 9. Један од њених радова (Библиог. 1.1) се налазио на 8. месту *Sciencedirect top 25 list of most downloaded articles* и најцитиранији је рад из Србије у области *Energy* (*Scopus*, 22.09.2018.). По последњој категоризацији истраживача сврстана је у А2 категорију.

БИБЛИОГРАФИЈА

Монографска студија/поглавље у књизи М12 или рад у тематском зборнику међународног значаја (М14): 4

Dragana Jugović, *Synthesis and structural characterization of some cathode materials for lithium-ion batteries*, accepted to be published in the Selection of Papers of the V Advanced Ceramics and Applications Conference, publisher Springer by the end of 2018, Editors: prof. Vojislav V. Mitić, prof. Rainer Gadow, prof. William E. Lee.*

13. Кристалографске картице

Резултати др Југовић о утакњеним структурима LiFePO_4 и $\text{Li}_2\text{FeSiO}_4$ су прихваћени и укључени у најзначајнију кристалографску базу ICDD (International Centre for Diffraction Data) као референтне кристалографске картице (обавештења о прихватују у базу су дата у прилогу).

Такође, кристалографске картице са решеним структурама др Југовић су објављене и у кристалографској бази ICSD (Inorganic Crystal Structure Database) за $\text{Li}_2\text{FeSiO}_4$ (референтна картица #237127), LiFePO_4 (референтна картица #160768) и флуором допирани LiFePO_4 (референтна картица #189057).

ИНСТИТУТ ТЕХНИЧКИХ НАУКА САНУ
БЕОГРАД
Кнез Михаилова 35/IV

Потврда о руковођењу пројектним задатком у оквиру пројекта ИИИ 45004

Др Драгана Југовић, виши научни сарадник Института техничких наука САНУ је од 2011. године ангажована као руководилац теме „*Катодни материјали за литијум јонске акумулаторе*“ у оквиру пројекта интегралних и интердисциплинарних истраживања из области хемије ИИИ 45004 „*Молекуларно дизајнирање наночестица контролисаних морфолошких и физичко-хемијских карактеристика и функционалних материјала на њиховој основи*“, којег финансира Министарство просвете, науке и технолошког развоја Републике Србије.

Истраживања у оквиру ове теме су усмерена на испитивање структурних, микроструктурних, морфолошких и електрохемијских особина једињења литијума и гвожђа у форми полијонских једињења (LiFePO_4 и $\text{Li}_2\text{FeSiO}_4$), као и на њихове модификације путем катјонског и анјонског допирања или стварањем композита са угљеником.

Остварени су значајни научноистраживачки резултати: 11 радова са SCI листе часописа (од тога: 6 радова M21a категорије, 4 рада M21 и 1 рад M23 категорије), 2 рада у националном часопису категорије M53, један регистрован патент на националном нивоу (M92), 2 одбрањене докторске дисертације на Факултету за физичку хемију Универзитета у Београду, 27 саопштења на међународним скуповима (3 саопштења M33 и 24 саопштења M34), 1 саопштење на националном скупу M64 и одржана су два предавања по позиву.

11 објављених радова има укупно 107 цитата и Хиршов фактор 7.

Др Драгана Југовић је својим ангажовањем подигла ниво истраживања у оквиру Пројекта и дала допринос у формирању младих научних кадрова.

У Београду,
27.09.2018.

Проф. др Драгољуб Ускоковић,
Руководилац пројекта ИИИ 45004

Poštovani,

Obaveštavamo Vas da je na zasedanju Mešovite komisije između Republike Srbije i Republike Slovenije, održanom 14. marta 2012. godine Vaš projekat stavljen na listu odobrenih projekata u okviru bilateralne saradnje sa Slovenijom.

U prilogu vam dostavljam potpisani Protokol sa Šestog zasedanja Mešovite komisije, kao i Tabelu odobrenih projekata sa opredeljenim sredstvima za realizaciju projekta.

Zahteve za refundaciju troškova putovanja, odnosno najave poseta slovenačkih istraživača, potpisane od rukovodioca projekta i direktora instituta /dekanata fakulteta, dostavite na obrasce koje možete pronaći na sajtu Ministarstva <http://www.mpn.gov.rs/sajt/page.php?page=284>

Zahteve možete dostaviti na mail adresu (Subject: Bilateralna saradnja sa Slovenijom) ili dostavite na adresu:

Na osnovu člana 192. Statuta Univerzitet u Beogradu – Fakulteta za fizičku hemiju, Nastavno-naučno veće Fakulteta, na IX vanrednoj elektronskoj sednici, održanoj 23.05.2017. godine, daje se

SAGLASNOST

nastavnicima i saradnicima:

- 1) dr Slavku Mentusu, redovnom profesoru u penziji Fakulteta za fizičku hemiju, redovnom članu SANU,
- 2) dr Ivani Stojković Simatović, docentu Fakulteta za fizičku hemiju,
- 3) dr Dragani Jugović, višem naučnom saradniku Instituta tehničkih nauka SANU,
- 4) dr Milošu Miloviću, naučnom saradniku Instituta tehničkih nauka SANU,
- 5) dr Miodragu Mitriću, naučnom savetniku INN "Vinča".

za učešće u bilateralnom projektu sa Slovenijom, pod nazivom "**Razvoj novih materijala za alkalno-jonske baterije**", sa dr Milicom Vujković, naučnim saradnikom Fakulteta za fizičku hemiju, u svojstvu rukovodioca sa srpske strane.

Odluku dostaviti:

- imenovanim,
- arhivi Fakulteta.

ДОДАТАК ДИПЛОМИ

Универзитет у Београду

Факултет за физичку хемију, Београд

ДОДАТAK ДИПЛОМИ

Важи само уз оригинал дипломе
број 5551500, издате 30. јуна 2016. године.

Додатак дипломи омогућује опис природе, нивоа, повезаности, садржаја и статуса студија које је похађало и успешно завршило лице наведено у дипломи уз коју је овај додатак издат. Информације морају бити наведене у свих осам поглавља.

Тамо где нема података треба дати обrazloženje o разлогу зашто их нема.

1. Подаци о имаоцу дипломе

- 1.1 Име: Милош
 1.2 Презиме: Миловић
 1.3 Датум рођења: 23. новембар 1987. године
 1.4 Број индекса студента: 2011/0308
 ЈМБГ: 2311987910022

2. Подаци о стеченој дипломи

- 2.1 Стучени научни назив: доктор наука – физичкохемијске науке
 2.2 Научна/уметничка/стручна област (или области) студија: физичко-хемијске науке
 2.3 Назив и статус високошколске установе која издаје диплому:
Универзитет у Београду, државна самостална високошколска установа
 2.4 Назив и статус високошколске установе која организује студије (уколико се разликује од 2.3):
Универзитет у Београду - Факултет за физичку хемију, државна високошколска установа
 2.5 Језик на коме се одржава настава: српски језик

3. Подаци о врсти и нивоу студија

- 3.1 Врста и степен студија: докторске академске студије, трећи степена
 3.2 Дужина трајања студија: 3 године (180 ЕСПБ)
 3.3 Услови уписа:

Завршене мастер академске студије (најмање 300 ЕСПБ) из области: физичке хемије, физике, хемије, биохемије, молекулске биологије и техничке физике, или неке групе на којима се изучавала физичка хемија или њој припадајуће области и стекла окојица пресечна оцена најмање 8 (осам) на основним и мастер академским студијама.

4. Подаци о садржају и постигнутим резултатима

- 4.1 Начин студирања: студије у седишту установе
 4.2 Назив студијског програма:

Физичка хемија

Циљеви студијског програма:

Докторске студије физичке хемије имају за циљ да пруже докторантима разумевање истраживачког процеса и његове методологије и осигурује им за самостална истраживања у области физичке хемије и њој сродних наука, комејтенану обраду и штумачење добијених резултата као и систематско и критичко праћење листературе. Подстиче се развој креативних способности кандидата које му омогућавају оригиналност у раду, али и критичност и објективност у размишљању и постизањима. Студенти се посебно кроз студијски истраживачки рад осигурују за практични рад и специфичне практичне вештине неопходне за истраживања у јединим областима. На тај начин кандидати се осигурују за квалитенји рад у својој области професионалној каријери јер су стекли рутину у примени различитих метода и техника у теоријским и експерименталним истраживањима. Циљ је да кандидат у току израде докторске дисертације овлада методама и методологијом научног рада, дође до оригиналних научних резултата које може публиковати у релевантним научним часописима, да стекне комејтенције које ће му омогућити лако укључивање у међународне научно-истраживачке пројекте.

- 4.3 Појединости студијског програма и постигнуте оцене:

- 2.1 Стучени научни назив: *доктор наука – физичкохемијске науке*
 2.2 Научна/уметничка/стручна област (или области) студија: *физичко-хемијске науке*
 2.3 Назив и статус високошколске установе која издаје диплому:
Универзитет у Београду, државна самостална високошколска установа
 2.4 Назив и статус високошколске установе која организује студије (уколико се разликује од 2.3):
Универзитет у Београду - Факултет за физичку хемију, државна високошколска установа
 2.5 Језик на коме се одржава настава: *српски језик*

3. Подаци о врсти и нивоу студија

- 3.1 Врста и степен студија: *докторске академске студије, трећи степен*
 3.2 Дужина трајања студија: *3 године (180 ЕСПБ)*
 3.3 Услови уписа:

Завршене мастерске студије (најмање 300 ЕСПБ) из областима: физичке хемије, физике, хемије, биохемије, молекулске биологије и техничке физике, или неке друге на којима се изучавала физичка хемија или њој припадајуће области и стекла окошта пресечна оцена најмање 8 (осам) на основним и мастерским студијама.

4. Подаци о садржају и постигнутим резултатима

- 4.1 Начин студирања: *студије у седишту установе*

- 4.2 Назив студијског програма:

Физичка хемија

Циљеви студијског програма:

Докторске студије физичке хемије имају за циљ да пруже докторантима разумевање истраживачког процеса и његове методологије и способе их за самостална истраживања у областима физичке хемије и њој сродних наука, комбинациону обраду и тумачење добијених резултата као и систематско и критичко праћење литературе. Поглавиче се развој креативних способности кандидата које му омогућавају оригиналност у раду, али и критичност и објективност у размишљању и посматрањима. Студенти се посебно кроз студијски истраживачки рад способствују за практични рад и стичу специфичне практичне вештине неопходне за истраживања у појединим областима. На тај начин кандидати се способствују за квалификованији рад у својој даљој професионалној каријери јер су стекли рутину у примени различитих метода и техника у теоријским и експерименталним истраживањима. Циљ је да кандидат у теку израде докторске дисертације овлада методама и методологијом научног рада, дође до оригиналних научних резултата које може поделити у релевантним научним часописима, да стекне комбинације које ће му омогућити лако укључивање у међународне научно-истраживачке пројекте.

- 4.3 Појединости студијског програма и постигнуте оцене:

ред. бр.	шифра	Наставни предмети		стас- тус	ЕСПБ	укупан пред.	број веж.	часова ост.	год. студ.	оце- на прог.	наставник

Комисија за одбрану дисертације: Ивана Стојковић Симатовић (менор), Драгана Југовић (менор), Никола Цвјетићанин, Миодраг Митрић, Милица Вујковић

4.4 Начин оцењивања на предметима:

Оцена	Значење оцене	Број поена од	до
10	одличан	91	100
9	изузетно добар	81	90
8	врло добар	71	80
7	добар	61	70
6	довољан	51	60
5	није положио	0	50

4.5 Просечна оцена и општи успех: 8,43 (осам и 43/100) - врло добар

5. Подаци о намени стеченог назива

5.1 Приступ даљим студијама:

Постдокторске студије. .

5.2 Професионални статус:

Сврха стручног програма докторских студија физичке хемије је образовање и развој усавешено, одговорно и конкурентно научно и наставничко кадар у различитим областима физичке хемије као што су овејаша физичка хемија, атомистика, хемијска термодинамика, електрохемија, стеклохемија, нуклеарна и радиохемија, хемијска кинетика, квантина хемија, физичка хемија чврстих стања, флуида и плазме, биофизичка хемија, заштита животне средине, наноматеријали и друго. Доктори наука – физичкохемијске науке су освојили зараду у научном штиму, зараду у интегрираним областима и за развој научно-исследовачког рада. Стекли су способности и знања да решавају своја истраживања превенцијом домаћој и међународној јавности; да планирају, организују и самостално воде оригинална научно-реlevantна истраживања и развој нових поступака и технологија.

6. Додатне информације

6.1 Додатне информације о студенту:

Студент је преходно завршио: Универзитет у Београду - Факултет за физичку хемију, Србија и Црна Гора, основне студије, 4,5 године, 21. маја 2004.

Студент је преходно завршио: Универзитет у Београду - Факултет за физичку хемију, Република Србија, мастер академске студије, 60 ЕСПБ, 10. јула 2007.

На захтев студента одобрено је мировање права и обавеза у школској 2010/2011 и 2011/2012. години. На захтев студента одобрено је продужење рока за завршењак студија за два семестра, сајасно Студију Универзитета у Београду и Студију Факултета за физичку хемију, а на основу Одлуке бр. 198 од 16.11.2016. године.

ПОЗИВНА ПИСМА

From: "Janko Jamnik" <janko.jamnik@ki.si>
Subject: FW: Invitation for the invited speaker - Electric Mobility Conference
Date: Thu, March 31, 2011 1:36 pm
To: dragana.jugovic@itn.sanu.ac.rs

Dear Prof. Dr. Jugović,

It gives me great pleasure to inform you that National Institute of Chemistry is the organizer of the International Electric Mobility Conference, which will be held in Ljubljana, Slovenia, in the last week of October, 2011. Please find more information at www.ki.si/e-mobility

The program committee has recognized you as one of leading experts in the field. Thus, we would like to invite you to serve as an invited speaker at our conference to share your insights into the latest developments in this field.

We would be deeply honored to have you participate in Electric Mobility Conference 2011. Please notify us of your response in writing by 10th of April, 2011.

Should you need any additional information, please do not hesitate to contact us.

Yours sincerely,

Prof. Dr. Janko Jamnik, director

National Institute of Chemistry
Hajdrihova 19
SI-1001 Ljubljana, Slovenia
Tel.: + 386 /1/ 4760 - 210
Fax: + 386 /1/ 4760-300
www.ki.si

National Institute of Chemistry is a Slovenian research institution in the field of chemistry and related disciplines. More information available at www.ki.si/en.

Dr. Dragana Jugovic
SASA, Inst Tech Sci, Knez Mihailova 35-4, Belgrade 11000, Serbia

9/21/2018

Dear Dr. Dragana Jugovic,

On behalf of the conference chair and committees, I take great pleasure to invite you to present an Invited Talk in the session of "Nanomaterials for Energy and Environmental Applications" at the coming Nano-Micro Conference 2018, which will take place from December 17 to 20 2018 at the Ramada Plaza Jeju, Jeju, South Korea. Your work entitled "The use of various dicarboxylic acids as a carbon source for the preparation of LiFePO₄/C composite" published in CERAMICS INTERNATIONAL has been cited more than 9 times now by other researchers. It has a big influence in the scientific community. We hope you will be able to accept this invitation and contribute your work which will be beneficial for finding international collaborators, making friends and improving your personal influence. You may check our confirmed speakers here.

The Nano-Micro Conference 2018 is supported by Nano-Micro letters (2017 IF 7.381, Open Access, No Publication Fee) and Shanghai Jiao Tong University (QS World University Rankings 2018 #59). The conference is established to promote the international academic exchange in nano and micro science. The topic of Nano-Micro Conference covers Nanomaterials for Energy and Environmental Applications, Synthesis and application of nanostructured photocatalysts, Synthesis, properties and application of graphene, 2D Heterostructures, Nanotechnology for sensors, Topological Insulators, Nanophotonic Devices and Materials. It will be an ideal academic platform to exchange experiences, ideas, insight, and information with other scientists from all around the world.

Beyond the well-prepared topical sessions, there will be a range of other exciting opportunities for visiting participants to get out and explore Jeju, the vibrant, dynamic and accessible city in South Korea. Through the well arranged scientific social activities, you might perhaps make the acquaintance of more researchers in your research field.

Except abstracts which have been published elsewhere, all the conference abstracts will be published in the Proceedings of the Nano-Micro Conference 2018 with an ISBN code. Each abstract will have a unique DOI number. Accepted full papers will be selected to publish in Nano-Micro Letters and Frontier Research Today. No publication fee is required to publish full papers in the above mentioned journals.

All participants including conference chairs, keynote speakers, invited speakers and contributed speakers are required to register and pay the conference registration fee. The conference registration fee covers the welcome reception, coffee breaks, lunch buffet, conference proceeding book and all scientific social activities. For your reference, you may visit a previous conference organized by us at <https://www.frt.org/frontier-research-talk/2017/nmc2017>.

If you could contribute, please reply me with a tentative title of your invited presentation. I will then send you a formal invitation letter signed by the conference chair, Prof. Yafei Anderson Zhang. You may send me your abstract or full paper before November 1st 2018. Presentation slots have 25 minutes for Invited talks (20 + 5 min for discussion) and 15 minutes for Contributed talks (12 + 3 min for discussion).

If you don't wish to accept this invitation, we understand your busy schedule. Please just simply ignore this email.

For further information, please visit <https://www.frt.org/frontier-research-talk/2018/nmc2018>.

Sincerely Yours,
Dr. Zhihua Zhou

Наслов **Invitation Letter to deliver an Invited Talk in the International Conference on Nanomaterials & Nanotechnology****2018**

Од ICNANO 2018 <contact@bcs18f.com>

За D. Jugovic <dragana.jugovic@itn.sanu.ac.rs>

Датум 2018-05-07 01:26

Dear Dr. D. Jugovic,

We would like to invite you to DELIVER AN INVITED TALK in the 08th anniversary of International Conference on Nanomaterials & Nanotechnology (ICNANO, www.nm18.iaamevents.org [1]). ICNANO 2018 will be held in the city of Nobel Prize, Stockholm, Sweden during 09 - 12 OCTOBER 2018. PLEASE SEND US YOUR CONSENT BY 11 MAY 2018 USING THE YES OR NO OPTIONS:

YES - I would like to deliver an Invited Talk in the International Conference on Nanomaterials & Nanotechnology 2018 [2]

NO - I am unable to deliver an Invited Talk in the International Conference on Nanomaterials & Nanotechnology 2018 [3]

We will offer you a 50% SUPPORT IN YOUR REGISTRATION FEE UNDER THE PRIVILEGE OF "INVITED SPEAKER". Please note that it is a purely academic contribution and organisers will not pay any honorarium for this service and you will responsible for the payment of your registration fees (only 50%), accommodation, and travel etc.

The ICNANO 2018 is intended to provide an opportunity to get together, to exchange information and ideas, to promote stimulus discussions and collaborations among participants and furthermore to foster young researchers and students of cross-disciplinary areas ranging from Nanomaterials: Synthesis and Characterization, functional nanomaterials and their applications, Nanomedicine, drug delivery, and MRI imaging, Nanocomputing (simulation works on nanomaterials and devices), Nanotechnology for energy, Nano-safety, Polymers composites, Nanoparticles, Magnetic nanoparticles, Nanowhiskers, Bionano particles, Carbon nanomaterials, Nanocomposites (Polymer matrix, metal matrix, ceramic Matrix and bionano composites), Nano- interphases/interfaces, Fully biocompatible nanocomposites, Nanocrystals, Optical properties of nanostructured materials, Electrical properties of nanostructured materials, Rheology of nanostructured materials and nanocomposites, Self-assembled nanostructured systems, Organic/inorganic hybrid nanomaterials, Nanomaterial, advanced materials synthesis and analysis, Self-Assembly of Nanostructures materials, Polymer Nanocomposites, Nanomaterials for Energy Applications, Nanomagnetics and spintronics, Green Nanotechnology, Nanobiotechnology, Nanomaterials for drug-delivery, Nanofiltration, Nanocatalysis, Porous Nanomaterials, Nanophotonics, Nanophosphors, Radiation effects in nanomaterials and nanocomposites, Nanoelectronics, Nanodevices, Quantum Dots, Characterization techniques for nanomaterials and any other related topic including nanomaterials Design and Fabrications, Characterizations, Integrations, and their Applications, etc.

The conference will be host on the Conference Centre, M/S Mariella, Viking Line Cruise ship cruising from Stockholm (Sweden) - Helsinki (Finland) - Stockholm (Sweden) during 09 - 12 October 2018. The conference will bring an amazing experience of cruise hospitality and visit two capital cities of Scandinavia, with allusion of the beautiful views of Stockholm archipelago (sailing through nearly 30,000 islands) in the autumn.

AWARDS: International Association of Advanced Materials announced different categories of Awards for this Congress and Parallel Events/Symposia 2018. Please send your nominations (CV and 2 - 3 pages statement of contributions with two recommendations) by email to secretarygeneral@iaamonline.org. THE LAST DATE FOR RECEIVING NOMINATIONS IS 01 JUNE 2018. For more information, please visit www.nm18.iaamevents.org/pages/awards [4]

CALL FOR SYMPOSIUM PROPOSAL: Please submit your symposium proposal with a short CV of the proposed organizer and co-organizers to secretarygeneral@iaamonline.org UNTIL 15 MAY 2018. For more information, please visit

www.nm18.iaamevents.org/pages/invite-proposals-for-symposium [5]

We look forward to receiving your response.

With kindest regards,

IAAM CONFERENCE COORDINATOR

International Conference on Nanomaterials & Nanotechnology 2018

Наслов **Invited speaker invitation regarding Crystal structure analysis and first principle investigation of F doping in LiFePO4**
Од <Yinpan@intergridconf.org>
За <dragana.jugovic@itn.sanu.ac.rs>
Одговори Yin Pan <Yinpan@intergridconf.org>
Датум 2016-10-29 06:24

Dear Jugovic, D.,
This is Yin Pan from the 2017 International Conference on New Energy and Future Energy System (NEFES 2017) which is sponsored by Yunnan Normal University. It is scheduled to be held in Kunming, Southwest China from September 22nd to 25th, 2017. Considering your research "Crystal structure analysis and first principle investigation of F doping in LiFePO₄" is good for this conference, I cordially invite you to participate in this event to share your new research findings.

Invited speakers could get 30% discount on standard registration fee. Selected papers will be published in well-known journals with ISI impact factors. Conference proceedings will be published in IOP Conference Series:Earth and Environmental Science, indexed by EI Compendex, Scopus, CPCI-S, Inspec, etc.

If you are not available for attendance, could you help us review one or two papers? Active Reviewers are candidates for Technical Program Committee next year.

It is highly appreciated if you kindly forward this conference information to your colleagues or friends in this field.

Yin Pan

Dear. Dragana Jugović ,

On behalf of the Organizing Committee, all of us have the pleasure to cordially invite you as an Invited Speaker at our upcoming meeting " *4th Global Congress & Expo on Materials Science and Nanoscience*", will be held during **October 15-17, 2018 at Amsterdam, Netherlands**. This meeting is a part of series of conferences organized by Scientific Federation, is expert-driven and is initiated to organize and facilitate proficient and international scientific conferences worldwide with associating the world class researchers.

This Meeting will be a great occasion for discussions of previous, present, and future research on "**Materials Science & Nanoscience**". It will provide an exciting scientific program, which will cover all aspects from the basics to their applications. It will be a great forum for students, postdoctoral fellows and established scientists from different countries to exchange ideas, and to broaden their knowledge. It will be an excellent occasion to meet researchers from around the world, widen professional contact and create new opportunities, including establishing new collaborations.

For further information and conference updates, please visit the conference website:
<https://scientificfederation.com/materials-nanoscience-2018/>

Your participation is important for the success of this meeting, and will be very much appreciated.

Looking forward to hear positive acknowledgement from you. Please feel free to write to us.

Sincerely,

Saidulu R

Dear Author,

This is the final call for an Invited Talk at the **8th International Symposium on Energy, 6-9 August 2018 in Aberdeen, Scotland, United Kingdom**. Session topics include such as

Rutgers Session: Porous materials and structures for energy applications
<https://energy8.nscj.co.uk/sessions/Rutgers.html>

The complete list of topics can be found at
<https://energy8.nscj.co.uk/Sessions.html>

Conference social activities and field trip are included and free
<https://energy8.nscj.co.uk/Activities.html>

The symposium will generate two awards, the Best Research Image and the Best Poster respectively.
<https://energy8.nscj.co.uk/Awards.html>

The abstract submission deadline has been extended to 25 April 2018. Submission Guidelines can be found at
<https://energy8.nscj.co.uk/Submission.html>

If you are not available for the conference time, or if you are lack of travel funding, you may like to consider **Free Participation for online abstract/poster/slides/video links**, for details please check
<https://energy8.nscj.co.uk/Online.html>

For more information, please check the conference homepage at
<https://energy8.nscj.co.uk/>

If you have any enquiries, please do not hesitate to contact chair@energy8.nscj.co.uk

Regards,
Conference Team

ПРЕДСЕДАВАЊА
НА НАУЧНИМ
СКУПОВИМА

- 11.40–12.00 **INV3 Modeling, designing and processing of barium titanate stannate functionally graded electroceramics**
Smilja Marković¹, Srečo Davor Škapin², Boban Stojanović³, Danilo Suvorov²,
Dragan Uskoković¹
¹Institute of Technical Sciences of SASA, Belgrade, Serbia
²Jožef Stefan Institute, Ljubljana, Slovenia
³Faculty of Science, University of Kragujevac, Serbia
- 12.00–12.15 **OR1 The Rare-Earths influences on doped BaTiO₃ Ceramics Microstructure and Electric Characteristics**
Vesna V. Paunović¹, Vojislav V. Mitić^{1,2}, Ljubiša M. Kocić¹, Miloš Marjanović¹,
Miloš Đorđević¹
¹ University of Niš, Faculty of Electronic Engineering, Niš, Serbia
² Institute of Technical Sciences of SASA, Belgrade, Serbia
- 12.15–12.30 **OR2 Implementation of Wide-Bandgap Materials in Power Electronics Components**
Jelena Milojković¹, Simon Le Blond², Vojislav Mitić³, Vančo Litovski²
¹Inovation centre of advanced technologies, Niš, Serbia
²University of Bath, Bath, UK
³Serbian Academy of Science and Arts, Belgrade, Serbia
- 12.30–12.45 **OR3 The nonorthogonality effects on capacitive behaviour of quantum dot**
Miloš S. Dražić, Ivana Đurišić, Viktor Z. Cerovski and Radomir Žikić
Institute of Physics, University of Belgrade, Pregrevica 118, Belgrade
- 12.45–13.00 **OR4 Spectroscopy characterization of YFeO₃ obtained by the mechanochemical synthesis**
Zorica Ž. Lazarević¹, Čedomir Jovalekić², Dalibor Sekulić³, Valentin N. Ivanovski⁴, Ana Umićević⁴, Martina Gilić¹, Nebojša Ž. Romčević¹
¹Institute of Physics, University of Belgrade, Belgrade, Serbia
²The Institute for Multidisciplinary Research, University of Belgrade, Serbia
³Faculty of Technical Sciences, University of Novi Sad, Serbia
⁴Institute of Nuclear Sciences Vinča, University of Belgrade, Serbia

- 13.00–14.00 **Buffet Lunch** Club SASA, Mezzanine
Blue Hall 2, 1st floor

- 14.00–15.40 **Keynote Session 2**
Chairpersons: Vladimir Blagojević, Dragana Jugović
- 14.00–14.25 **KN5 Environmental forensics – concepts and contemporary challenges**
Goran Kniewald
Rudjer Bošković Institute, Zagreb, Croatia
- 14.25–14.50 **KN6 Fractals, Materials and Energy Technologies**
Ljubiša M. Kocić¹, Vojislav V. Mitić^{1,2}, Vesna V. Paunović¹
¹University of Niš, Faculty of Electronic Engineering, Niš, Serbia
²Institute of Technical Sciences of SASA, Belgrade, Serbia

14.25 - 14.50	KN-EM2 Thermodynamics of Vapor-Liquid-Solid Growth <u>Jonas Johansson</u> Solid State Physics and NanoLund, Lund University, Lund, Sweden
14.50 – 15.15	KN-EM3 The use of ceramic coating by ESD technique to improve the service life of copper spot welding caps <u>Sükrü Talaş</u> Afyon Kocatepe University, Faculty of Technology, ANS Campus, Afyonkarahisar, Turkey
15.15 - 15.40	KN-EM4 Some practical application of TiO₂ <u>Mirjanić D. Lj.¹</u> , Pelemiš S. ² ¹ Academy of Sciences and Arts of Republic of Srpska, B&H ² Faculty of Technology, University of East Sarajevo, B&H
15.40 - 16.00	INV-EM1 Granular material transport and mixing - DEM/CFD numerical approach <u>Lato Pezo</u> University of Belgrade, Institute of General and Physical Chemistry, Belgrade, Serbia

Hall, 1st Floor

16.00 - 16.20	Coffee Break
----------------------	---------------------

Red Hall, 1st Floor

16.20 - 18.05	Session: Electro and Multifunctional 2 Chairpersons: <u>Dragana Jugović</u> , <u>Saleem F. Shaukat</u>
16.20 - 16.40	INV-EM2 Assessing electrical properties of ceramic samples <u>D. Olćan¹</u> , N. Obradović ² , S. Filipović ² , A. Terzić ³ , V. Pavlović ² , M. Kachlik ⁴ , K. Maca ⁴ , A. Djordjević ¹ ¹ School of Electrical Engineering, University of Belgrade, Serbia ² Institute of Technical Sciences, Serbian Academy of Sciences and Arts, Belgrade, Serbia ³ Institute for Testing of Materials IMS, Belgrade, Serbia ⁴ EITEC BUT, Brno University of Technology, 61600 Brno, Czech Republic

on
MATERIALS SCIENCE FOR ENERGY RELATED APPLICATIONS
(Belgrade, September 26th-27th 2014)

Place: University of Belgrade, Faculty of Physical Chemistry, Studentski trg 12-16, Belgrade

Room: 368 (Amphitheatre)

P R O G R A M

DAY 1 – September 26th 2014

REGISTRATION and OPENING

8:00 to 9:00 Registration and posters mounting

9:00 to 9:10 **OPENING WORDS**

Session 1.1 – Methods (Chairperson: Natalia V. Skorodumova)

9:10 to 9:30 Olga Yu. Vekilova, Johan O. Nilsson, Olle Hellman, Sergei I. Simak and Natalia V. Skorodumova
AB INITIO NON-EQUILIBRIUM MOLECULAR DYNAMICS COMBINED WITH COLOR-DIFFUSION ALGORITHM: A THEORETICAL STUDY OF IONIC CONDUCTIVITY IN OXIDES

9:30 to 9:50 Mikael Leetmaa
THE KINETIC MONTE-CARLO APPROACH TO STUDY SLOW DIFFUSION PROCESSES IN ENERGY RELATED MATERIALS USING KMCLib

9:50 to 10:10 Petar Laušević, Vladimir Nikolić, Milica Marčeta Kaninski, Predrag Pejović
MODELING OF ELECTROCHEMICAL DOUBLE-LAYER CAPACITORS

10:10 to 10:30 Biljana Babić, Branko Matović
NEW SYNTHETIC PROCEDURE FOR NANOMETRIC CARBIDES

Coffee break/Posters (10:30 to 11:00)

Session 1.2 – Solid electrolytes and oxide materials for energy related applications
(Chairperson: Dragana Jugović)

11:00 to 11:20 Anton Kokalj, Robert Dominko, Gregor Mali, Anton Meden, Miran Gaberšček, and Janez Jamnik
DESIGNING $Li_2Mn_xFe_{1-x}SiO_4$ AS A POTENTIAL Li-BATTERY CATHODE MATERIAL

11:20 to 11:40 Milica Vujković, Slavko Mentus
LITHIUM vs. SODIUM INTERCALATION MATERIALS IN AQUEOUS SOLUTIONS

11:40 to 12:00 O. Hellman, N. V. Skorodumova and S. I. Simak
TUNING IONIC CONDUCTIVITY IN CERIA BY VOLUME OPTIMIZATION

Session I: 15⁰⁰-18³⁰

Chairpersons: Dragana Jugović and Irena Nikolić

15⁰⁰-15¹⁵ Silver Nanowire Based Networks for Transparent Electrode Applications

Vuk Radmilović¹, Manuela Göbel², Silke Christiansen^{2,3}, Erdmann Specker⁴, Velimir Radmilović^{5,6}

¹Innovation Center, University of Belgrade, Faculty of Technology and Metallurgy, Karnegijeva 4, 11120 Belgrade, Serbia, ²Max Planck Institute for the Science of Light, Günther-Scharowsky-Str. 1, 91058 Erlangen, Germany, ³Helmholtz Centre Berlin for Materials and Energy, Hahn-Meitner Platz 1, 14109 Berlin, Germany, ⁴Center for Nanoanalysis and Electron Microscopy (CENEM), Friedrich-Alexander University Erlangen-Nürnberg, Cauerstrasse 6, 91058 Erlangen, Germany, ⁵University of Belgrade, Faculty of Technology and Metallurgy, Karnegijeva 4, 11120 Belgrade, Serbia, ⁶Serbian Academy of Sciences and Arts, Knez Mihailova 35, 11000 Belgrade, Serbia

15¹⁵-15³⁰ Direct Observation of the Magneto Crystal Anisotropy Axis in Fe_{3-x}O₄ Nanoparticles by MFM

Carlos Moya¹, Óscar Iglesias-Freire^{2,3}, Nicolás Pérez¹, Xavier Batlle¹, Amilcar Labarta¹, Agustina Asenjo²

¹Departament de Física Fonamental, Institut de Nanociència i Nanotecnologia, Universitat de Barcelona, Barcelona, Spain, ²Instituto de Ciencia de Materiales de Madrid (ICMM-CSIC), Cantoblanco, Madrid, 28049 Spain, ³Department of Physics, McGill University, Montreal, Canada

15³⁰-15⁴⁵ Smart Hydrogels of Thermoresponsive Interpenetrating Networks of Poly(N-isopropylacrylamide) and Polyacrylamide

Jiri Spevacek, Marek Radecki, Lenka Hanykova, Alexander Zhigunov, Zdenka Sedlakova

Institute of Macromolecular Chemistry, Academy of Sciences of the Czech Republic, Prague, Czech Republic; Faculty of Mathematics and Physics, Charles University, Prague, Czech Republic

15⁴⁵-16⁰⁰ Methodology of Formation of New Generation Multilayer Coatings for Cutting Tools

Alexey Vereschaka¹, Anatoly Vereschaka¹, Boris Mokritskii², Andre Batako³

¹Moscow State Technological University STANKIN, ²Komsomolsk-na-Amure State Technical University, ³Liverpool John Moores University

16⁰⁰-16¹⁵ Design of Phase Percolated Composites for Military Application

Paulina Chabera, Anna Boczkowska

Warsaw University of Technology, Faculty of Materials Science and Engineering, Woloska St 141, 02-507 Warsaw

Session II: 11⁰⁰-12¹⁵

Chairpersons: Dragana Jugović and Pozhhan Mokhtari

11⁰⁰-11¹⁵ Structural and electrochemical study of lithium iron (II) pyrophosphate

Dragana Jugović¹, Miloš Milović¹, Miodrag Mitrić², Valentin Ivanovski², Srećko Škapin³, Dragan Uskoković¹

¹Institute of Technical Sciences of SASA, Belgrade, Serbia; ²Vinča Institute of Nuclear Sciences, University of Belgrade, Belgrade, Serbia; ³Jožef Stefan Institute, Jamova 39, SI-1000 Ljubljana, Slovenia

11¹⁵-11³⁰ Li₄Ti₅O₁₂. Promising anode material for Li-ion batteries synthesized via mechanochemically assisted route

Martin Fabián¹, Markéta Žukalová², Ladislav Kavan², Vladimír Šepelák¹, Mamoru Senna³

¹Institute of Geotechnics, Slovak Academy of Sciences, 040 01 Košice, Slovak Republic; ²J. Heyrovský Institute of Physical Chemistry, Acad. Sci. Czech Republic, 182 23 Praha, Czech Republic; ³Faculty of Science and Technology, Keio University, 223-8522, Yokohama, Japan

11³⁰-11⁴⁵ CTAB- and pluronic F-127-assisted microwave processing of ZnO particles with modified morphology and optical properties

Smilja Marković¹, Ivana Stojković-Simatović², Sanita Ahmetović², Ljiljana Veselinović¹, Stevan Stojadinović³, Vladislav Rac⁴, Srećko Škapin⁵, Dragan Uskoković¹

¹Institute of Technical Sciences of SASA, Knez Mihailova 35/IV, 11000 Belgrade, Serbia; ²University of Belgrade, Faculty of Physical Chemistry, Belgrade, Serbia;

³University of Belgrade, Faculty of Physics, Belgrade, Serbia; ⁴University of Belgrade, Faculty of Agriculture, Belgrade, Serbia; ⁵Jožef Stefan Institute, Ljubljana, Slovenia

11⁴⁵-12⁰⁰ Synthesis of tribological WS₂ powder from oxide precursor

Nataša Gajić¹, Željko Kamberović², Zoran Anđelić³, Jarmila Trpevska⁴, Beatrice Plešingerová⁴, Jovana Šokić³

¹University of Belgrade, Innovation Center of the Faculty of Technology and Metallurgy in Belgrade Ltd., Belgrade, Serbia; ²University of Belgrade, Faculty of Technology and Metallurgy, Belgrade, Serbia; ³University of Belgrade, Innovation center of Faculty of Chemistry Ltd., Belgrade, Serbia; ⁴Technical University of Košice, Faculty of Materials, Metallurgy and Recycling, Košice, Slovakia

12⁰⁰-12¹⁵ Thermochemistry aspects of mechanochemistry activation of the flotation processes

Milan M. Petrov, Marina S. Blagojević, Ljubiša D. Andrić, Dragan S. Radulović
Institute for Technology of Nuclear and other Raw Materials, Belgrade, Serbia

Beograd, 20. 09. 2018.

P O T V R D A

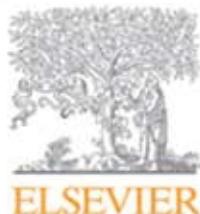

Ovim se potvrđuje da je **dr Dragana Jugović**, viši naučni saradnik Instituta tehničkih nauka SANU član Srpskog keramičkog društva od 2014.godine. Unapređenjem i podizanjem kvaliteta istraživanja u oblasti savremenih keramičkih materijala za litijum jonske baterije i formiranja mlađeg naučnog kadra, dr Dragana Jugović je dala značajan doprinos međunarodnoj konferenciji Advanced Ceramic Materials and Application koju ovo društvo organizuje od 2012.godine.

Potvrda se izdaje na lični zahtev radi izbora u zvanje naučni savetnik.

Srdačan pozdrav,

Prof. Dr. Vojislav Mitić
Predsednik Srpskog Keramičkog Društva

ЗАВОД ЗА ИНТЕЛЕКТУАЛНУ СВОЈИНУ

990 број 2016/8248-П-2010/0488

Датум: 1.8.2016 године

Београд, Кнегиње Љубице 5

2-1/7

Завод за интелектуалну својину је, на основу члана 31. Закона о министарствима („Службени гласник РС”, бр. 44/14, 14/15, 54/15 и 96/15 - др. закон), чл. 67, 69, 70. и 107. Закона о патентима („Службени гласник РС”, број 99/11) решења о преносу овлашћења за доношење и потписивање управних и других аката Завода за интелектуалну својину 990 број 021-2016/2212-01 од 31.3.2016. године, у управном поступку по пријави патента број П-2010/0488, подносиоца ИНСТИТУТ ТЕХНИЧКИХ НАУКА СРПСКЕ АКАДЕМИЈЕ НАУКА И УМЕТНОСТИ, Кнез Михаилова 35/IV, 11000 Београд, RS, ради признања патента, донео следеће

РЕШЕЊЕ

I ПРИЗНАЈЕ СЕ патент по пријави број П-2010/0488 од 12.11.2010. године, за проналазак под називом: „ПОСТУПАК ДОБИЈАЊА КОМПОЗИТА ЛИТИЈУМ ГВОЖЂЕ ФОСФАТА (LiFePO₄) И УГЉЕНИКА МЕТОДОМ ПРЕЦИПИТАЦИЈЕ У РАСТОПУ СТЕАРИНСКЕ КИСЕЛИНЕ”, према опису, патентним захтевима и цртежима из патентног списка.

II УПИСУЈЕ СЕ у Регистар патената Завода за интелектуалну својину, признато право из тачке I диспозитива овог решења под бројем

54805

Носилац (оци) патента:

ИНСТИТУТ ТЕХНИЧКИХ НАУКА
СРПСКЕ АКАДЕМИЈЕ НАУКА И УМЕТНОСТИ
Кнез Михаилова 35/IV
11000 Београд, RS

Проналазач(и):

УСКОКОВИЋ Драган
Моштаничка 121,
Мала Моштаница, Обреновац,
11500 Београд, RS;

ЈУГОВИЋ Драгана
Лозничка 19а,
11000 Београд-Врачар, RS;

КУЗМАНОВИЋ Маја
Драге Спасић 29,
11030 Београд-Чукарица, RS

Признаје се право
првенства по пријави:

III Податке о признатом праву и први патентни захтев објавити у „Гласнику интелектуалне својине” број 5/2016.

О б р а з л о ж е ъ е

ИНСТИТУТ ТЕХНИЧКИХ НАУКА СРПСКЕ АКАДЕМИЈЕ НАУКА И УМЕТНОСТИ,
Кнез Михаилова 35/IV, 11000 Београд, RS, поднео је дана 12.11.2010. године, пријаву патента број
П-2010/0488, за проналазак под називом: „ПОСТУПАК ДОБИЈАЊА КОМПОЗИТА ЛИТИЈУМ
ГВОЖЂЕ ФОСФАТА (LiFePO₄) И УГЉЕНИКА МЕТОДОМ ПРЕЦИПИТАЦИЈЕ У РАСТОПУ
СТЕАРИНСКЕ КИСЕЛИНЕ”.

У спроведеном поступку суштинског испитивања пријаве патента, у смислу члана 104. Закона
о патентима („Службени гласник РС”, број 99/11), утврђено је да су испуњени сви услови за
признање патента прописани овим законом.

Имајући у виду наведено, Завод је, на основу чл. 107, 109. и 111. Закона о патентима, одлучио
као у диспозитиву овог решења.

Такса за исправу о признатом праву плаћена је у складу са Тарифним бројем 123. Тарифе
републичких административних такси, која је саставни део Закона о републичким административним
таксама („Службени гласник РС”, бр. 43/03, 51/03-исправка, 53/04, 42/05, 61/05, 101/05-др. закон,
42/06, 47/07, 54/08, 5/09, 54/09, 35/10, 50/11, 70/11, 55/12, 93/12, 47/13, 65/13-др. закон, 57/14, 45/15-
усклађени дин. износи, 83/15 и 112/15), док су трошкови за објаву података о признатом праву и за
штампање патентног списка плаћени у складу са Тарифним бр. 1. и 2. Тарифе трошкова поступка и
трошкова за пружање информационих услуга Завода за интелектуалну својину, која је саставни део
Одлуке о висини и начину плаћања трошкова поступка и трошкова за пружање информационих
услуга Завода за интелектуалну својину („Службени гласник РС”, број 113/13), а доказ о уплати је
приложен уз поднесак број RS/E/2016/3326-П-2010/0488 од 13.6.2016. године.

Упутство о правном средству:

Против овог решења може се
изјавити жалба Влади Републике Србије
у року од 15 дана од дана пријема
решења, а преко овог Завода. Уз жалбу
треба доставити доказ о уплати
административне таксе у износу од
440,00 динара.

Решење доставити:

Fluorination of sodium cobalt oxide: effects on structure and electrochemical performance

Miloš Milović¹, Dragana Jugović², Miodrag Mitrić², Maja Popović², Zlatko Rakočević² and Dragan Uskoković¹

¹ Institute of Technical Sciences of SASA, Belgrade

Lower market cost of sodium in contrast to lithium makes sodium intercalating compounds attractive for application as electrodes in rechargeable sodium batteries. Among them, sodium cobalt oxide, Na_xCoO_2 , have been extensively investigated as potential cathode material for sodium ion batteries [1]. Na_xCoO_2 crystallizes in a number of layered structures depending on sodium content, oxygen partial pressure and temperature [2]. In each of these structures, edge-sharing CoO_6 octahedra form sheets between which sodium ions are inserted with trigonal prismatic (P) or octahedral (O) environment. The packing differs in the number of sheets within the unit cell – 2 or 3 sheets – creating three possible structural types denoted as O3, P2, and P3. The P2 type of structure (displayed in Figure 1) is considered as the most suitable for electrochemical application for its cycle stability.

Within this research the possibility of fluorine doping of the P2 type Na_xCoO_2 powder was examined. As fluorine substitution already proved successful in improving cathode performance of layered lithium-based counterparts, the effects of fluorination on structure and electrochemical properties of P2 Na_xCoO_2 were investigated and discussed.

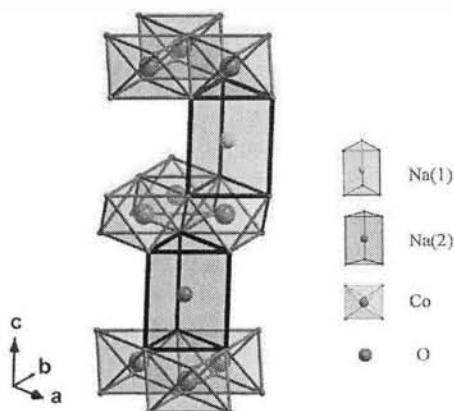

Figure 1. P2 structure of Na_xCoO_2 .

A modified solid state reaction (an adopted method that includes sequential cycles of rapid heating – at 750°C in the air with dwell time of 15 minutes – and rapid cooling, with an intermediate grinding of the powder between two cycles) was applied for the preparation of a pristine Na_xCoO_2 powder. Na_2CO_3 and Co_3O_4 in a molar ratio 1.7 : 1 were used as starting compounds. Fluorination of the synthesized Na_xCoO_2

has been conducted at 200 °C in a vacuum evacuated atmosphere with NH_4HF_2 as a fluorination agent. The obtained samples were analysed by X-ray powder diffraction, FTIR spectroscopy, FESEM electron microscopy, X-ray photoelectron spectroscopy and Galvanostatic charge/discharge tests.

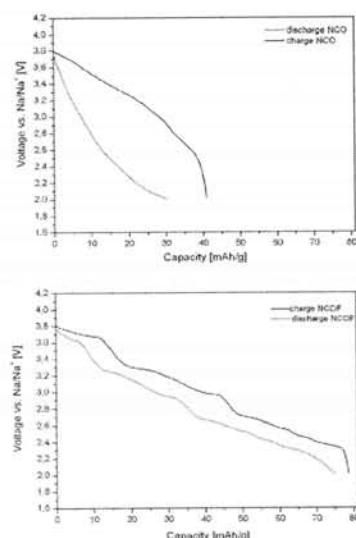

Figure 2. Galvanostatic charge/discharge profiles for pristine (upper graph) and fluorinated powder (lower graph).

The results of the Rietveld refinement combined with the findings from the X-ray photoelectron spectroscopy measurements confirm $\text{Na}_{0.76}\text{CoO}_2$ and $\text{Na}_{0.44}\text{CoO}_{1.96}\text{F}_{0.04}$ stoichiometries for the pristine and fluorinated powders, respectively, which implies that 4 at.% of fluorine ions per formula unit are incorporated in the structure. Fluorination modifies the structure through both the reduction of crystallite size and the increase of interslab distance. Consequently, fluorinated powder has showed the improvement of the electrochemical performances (Figure 2).

Influence of platinization of mechanically activated nuclear grade graphite powders on the hydrogen adsorption process

Vladimir Lukić¹, Dragana Čekerevac Mirković², Dragana Jugović³ and Aleksa Maričić¹

¹ Faculty of Technical Sciences Čačak, Svetog Save 65, 32102 Čačak Serbia

² Public company Nuclear Facilities of Serbia, Mike Alasa 12-14, Vinča, Belgrade

³ Institute of Nuclear Sciences Vinča, POB 522, Belgrade 11001, Serbia

Non-activated powder of nuclear grade graphite and powders of nuclear grade graphite that were milled for 10, 20 and 30 minutes are doped with 0.03% of platinum. XRD analysis of initial and activated graphite powders was used for structural characterization. Hydrogen adsorption performed in isothermal conditions showed that platinization of powder samples of nuclear grade graphite decreases time needed for reaching adsorbent saturation during hydration. Simultaneously it was shown that platinization, due to the hydrogen spillover effect, increases adsorption capacity in a function of mechanical activation duration.

Increase of the adsorption capacity, in comparison to the non-platinized samples (relative to non-platinized samples) is: 5% for initial non-activated sample, 12% for graphite milled 10 minutes, 18% for graphite milled 20 minutes and 26% for graphite milled 30 minutes. The analysis of isothermal time dependencies of hydrogen pressure in the chamber, at the temperatures of 60 °C, 70°C and 80°C, enabled definition of adsorption mechanism in the powders. At the same time, the kinetic parameters of hydrogen adsorption process are determined.

Figure 1 shows observed average chamber pressure change for non-platinized and platinized samples of different milling times, illustrating the effect of platinization on increase of adsorption capacity. Figure 2 shows the results of calculations of pressure change using ideal gas equation in case of average applied initial pressure (1.6 bar) and average temperature for isothermal treatment (70°C).

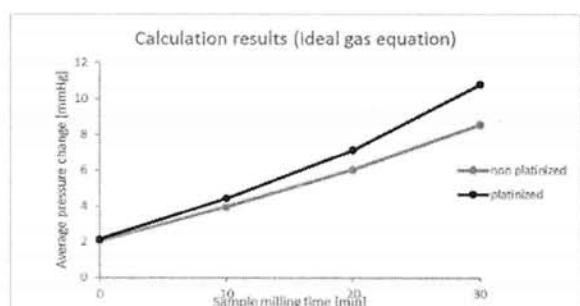

Figure 1. Average chamber pressure change observed in measurements

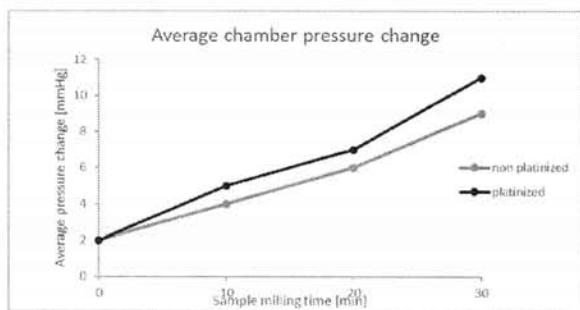

Figure 2. Calculated average pressure change for medium temperature (70 °C) and medium initial pressure (1.6 bar)

Key words: nuclear graphite, hydrogen, platinization, hydrogen adsorption

Na_{0.44}MnO₂ as a cathode material for aqueous sodium-ion batteries

Aleksandra Gezović¹, Milica Vujković¹, Dragana Jugović², Ivona Janković-Častvan³ and Ivana Stojković Simatovic¹

The application of rechargeable batteries is growing significantly and it became the most important field for large-scale electric energy storage. While lithium-ion batteries (LIBs) have great commercial success, due to their large energy and power density, their application was limited because of the availability of lithium and its high cost. Sodium-ion batteries (SIBs) can be a promising alternative due to the huge availability of sodium, its low price and similar intercalating electrochemistry to LIBs [1]. Among various Na-ion battery materials, low-cost and tunnel-type, Na_{0.44}MnO₂ (NMO) was regarded as one of the most promising cathode materials for sodium-ion batteries, because of its high theoretical specific capacity (122 mA h g⁻¹) and good cyclability [2]. In this work, for the synthesis of NMO powder, rapid glycine-nitrate method (GNM) was used, which, on the basis of the literature review, has not been used to synthesize this material so far.

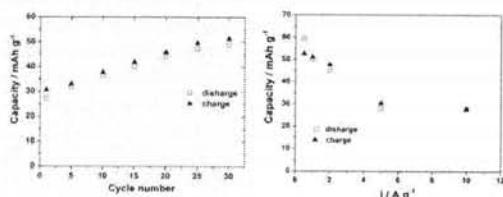

Figure 1. The discharge/charge capacity of Na_{0.44}MnO₂ vs. number of cycles (left) and current rates (right) in aqueous NaNO₃ solution.

Na_{0.44}MnO₂ as a potential cathode material for sodium-ion batteries, was synthesized by glycine-nitrate method (GNM). Powder synthesis procedure includes preparation and mixing of NaNO₃ and Mg(NO₃)₂ aqueous solutions, corresponding to a stoichiometric ratio of 0.44 for Na/Mn. Glycine was added to the mixture with molar ratio of glycine-to-nitrate 1.2. The resulting precursor solution was placed in a glass beaker and heated in an oven until spontaneous ignition occurred. The obtained powder was heated in the air at 900 °C for 4 h. The structure and morphology of synthesized powder were characterized by X-ray diffraction (XRD) and field-emission scanning electron microscopy (FESEM). XRD patterns were recorded at Philips PW-1050 over a 2θ range 10–70° with a step of 0.05° and a counting time of 5 s. The morphology of the synthesized powder was analyzed by FESEM (TESCAN, MIRA3 XMU) at 20 kV. The electrochemical behavior of NMO was investigated by cyclic voltammetry (CV) and chronopotentiometry (CP) in NaNO₃ aqueous solution.

Electrochemical performances were tested by cyclic voltammetry and chronopotentiometry using Gamry PCI4/300 Potentiostat/ Galvanostat/ ZRA) in NaNO₃ aqueous solution. A platinum foil was used as a counter electrode, while saturated calomel electrode was used as a reference electrode. The working electrode was made of NMO powder (85%), carbon black (10%) and polyvinylidene fluoride (5%), as binder, in a certain amount of N-methyl-2-pyrrolidone, as solvent. The suspension was homogenized in an ultrasonic bath to form a homogeneous slurry and afterwards transferred on glassy carbon rod and dried under vacuum 10⁻² mbar at 140°C for 4 h. The phase structure of the product was identified as orthorhombic structured Na_{0.44}MnO₂ with *Pbam* space group (JCPDS No.27-0750). A minor amount of impurities was detected and identified as Mn₂O₃ (JCPDS No.75-1560) [3]. The average width and length of uniform rod-like particles were found to be ~80 nm and ~800 nm, respectively. CVs showed is capable of intercalating/deintercalating sodium ions in an aqueous electrolyte solution. The initial charge and discharge specific capacity, measured in aqueous solution of NaNO₃ at scan rate of 20 mV s⁻¹, amounted to 30,6 mA h g⁻¹ and 27,1 mA h g⁻¹, respectively. It increases (Fig.1) throughout charging/discharging, reaching the value of 51.4 mA h g⁻¹ and 48.9 mA h g⁻¹, after 30 cycles. CP measurements revealed that the capacity decreases with the increase of the current rates. It's discharging values were found to be 59.4 mA h g⁻¹ at 0.5 A g⁻¹ and 27.8 mA h g⁻¹ at 10 A g⁻¹ (Fig.1). Relatively high discharge capacity makes it promising cathode material for aqueous rechargeable sodium-ions batteries. This study was supported by the Ministry of Education, Science and Technological Development of the Republic of Serbia under Grant no III45014 and the Serbian Academy of Sciences and Arts through the project F-190 "Electrocatalysis in the contemporary processes of energy conversion".

ABSTRACT

$\text{Na}_{0.44}\text{MnO}_2$ synthesized by glycine-nitrate method (GNM) was described in this paper and it was characterized by X-ray powder diffraction (XRD) and field-emission scanning electron microscopy (FE-SEM). Electrochemical performances of $\text{Na}_{0.44}\text{MnO}_2$ were studied by cycling voltammetry (CV) at various scan rates in NaNO_3 and LiNO_3 aqueous solutions in order to compare the intercalation/deintercalation kinetics of Li^+ and Na^+ ions. The initial discharge capacity was found to be 27.1 and 27.44 in the aqueous solution of NaNO_3 and LiNO_3 , respectively, and after 30 cycles its values increased for 12% in both electrolytes.

INTRODUCTION

The rechargeable batteries are seen as one of the most promising system for energy conversion and storage. Lithium-ion batteries (LIBs) are the most investigate type of rechargeable battery, due to its specific energy and specific power, high energy density storage, small weight and long life time [1]. In recent years, the development of the sodium-ion batteries (SIBs) has become more attractive, owing to the low cost and natural abundance of sodium, as well as the physicochemical similarity with lithium. The working principle of SIBs is identical to LIBs. One of the main problems of SIBs is the larger radius of Na-ion than of Li-ion, which could cause more difficult intercalation compared to Li-ion [2]. Until now investigated LIBs and SIBs use highly toxic and flammable organic solvents which have low ionic conductivity and high price. Aqueous LIBs and SIBs have a series of advantages: they do not contain flammable organic electrolytes, the ionic conductivities of the aqueous electrolyte is about two orders of magnitude higher than in nonaqueous electrolyte and the electrolyte salt and solvent are

cheaper. Manganese oxides, vanadium oxide or phosphates are used as electrode materials (cathodic and anodic) in both types of batteries. Li–Mn–O or Na–Mn–O systems with tunnel or layered crystal structures are the mostly used type of manganese oxides as electrode materials. $\text{Na}_{0.44}\text{MnO}_2$ (NMO) have been synthesized by different methods such as hydrothermal process, thermo-chemical conversion process, polymer-pyrolysis process, molten salt technique, electrostatic spinning method, spray pyrolysis process and spray drying process [3]. In this work NMO was synthesized by glycine-nitrate method (GNM), which, according to the literature, has not been used for synthesis of this material so far.

EXPERIMENTAL

NaNO_3 and $\text{Mn}(\text{NO}_3)_2$ aqueous solutions were mixed in ratio corresponding to a stoichiometric ratio of Na/Mn in NMO. The glycine was added to the mixture with molar ratio of glycine-to-nitrate 1.2. The resulting precursor solution was placed in a glass beaker and heated in an oven until spontaneous ignition occurred. The obtained powder was heated in the air at 900 °C for 4 h.

The structure of synthesized powder was characterized by X-ray diffraction (XRD) and XRD pattern was recorded at Philips PW-1050 over a 2θ range 10–70° with a step of 0.05° and a counting time of 5 s. The morphology of the synthesized powder was analyzed by FE-SEM (TESCAN, MIRA 3 XMU) at 20 kV. The electrochemical behavior of NMO was investigated by cyclic voltammetry (CV) at various scan rates, in both NaNO_3 and LiNO_3 aqueous solutions using Gamry PCI4/300 Potentiostat/Galvanostat/ZR

A in three-electrode cell. A platinum foil was used as a counter electrode, saturated calomel electrode (SCE) was used as a reference electrode and the working electrode was made of NMO powder (85%), carbon black (10%) and polyvinylidene fluoride (5%) in N-methyl-2-pyrolidone as solvent. The suspension was homogenized in an ultrasonic bath to form homogeneous slurry and afterwards transferred on

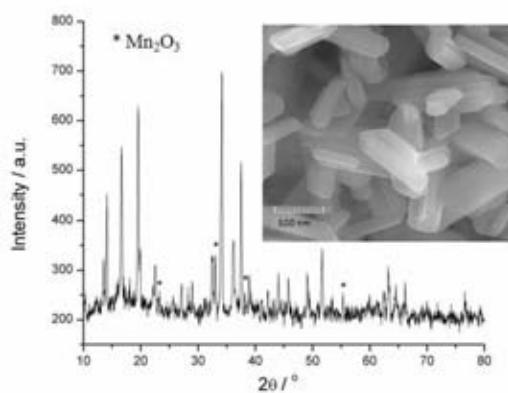

Figure 1. XRD pattern and FE-SEM image of $\text{Na}_{0.44}\text{MnO}_2$. The asterisk shows the positions of Mn_2O_3 reflections.

glassy carbon rod and dried under vacuum 10-2 mbar at 140°C for 4h.

RESULTS AND DISCUSSION

Fig. 1 shows the XRD pattern of the synthesized material. The sharp diffraction peaks indicated that the product was well-crystallized and was identified as orthorhombic structured of $\text{Na}_{0.44}\text{MnO}_2$ with $Pbam$ space group (JCPDS No.27-0750). A minor amount of impurities was detected and identified as Mn_2O_3 (JCPDS No.41-1442) [3]. The FE-SEM images of NMO indicated that the powder consisted of uniform rod-like particles and the average width and length of particles were found to be ~80 nm and ~800 nm, respectively, Fig 1.

Cyclic voltammograms of NMO recorded in NaNO_3 and LiNO_3 aqueous solutions, by high polarization scan rates from 20 to 400 mV s^{-1} within the voltage range -1.30 to 1.35 V vs. SCE, are shown on Fig. 2. For both solutions, the shape of CV's and peaks position were similar for all rates which means that process of intercalation/deintercalation of Li^+ and Na^+ are reversible and synthesized material can be used in lithium and sodium batteries. In NaNO_3 electrolyte at a polarization rate of 20 mVs^{-1} , NMO showed three anodic peaks at the potential 0.005, 0.723 and 1.168 V and two cathodic peaks at the potentials of 0.4 and -0.32 V vs. SCE. In the case of LiNO_3 as an electrolyte, the three anodic peaks were present at the potential 0.116, 0.649 and 1.206 V while two cathodic peaks were at the potential 0.729 and -0.242 V vs. SCE.

The initial discharge capacity of NMO in NaNO_3 and LiNO_3 aqueous solution at the polarization rate of 20 mV s^{-1} is 27.1 and 27.4 mAh g^{-1} while

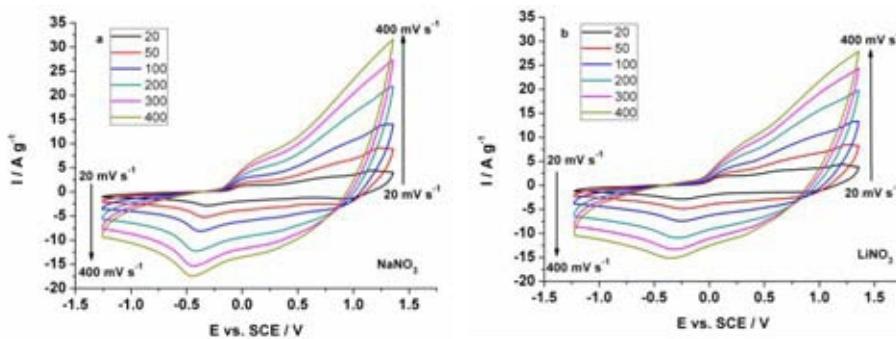

Figure 2. CV's of $\text{Na}_{0.44}\text{MnO}_2$ in aqueous solution of a) NaNO_3 and b) LiNO_3 at scan rate of 20, 50, 100, 200, 300 and 400 mVs^{-1} .

initial charge capacity is 30.6 and 30.5 mAh g⁻¹, respectively. The discharge capacity of NMO in NaNO₃ and LiNO₃ electrolytes, after 30 cycles, at the same polarization rate, was increased to values 51.1 and 53.3 mAh g⁻¹, while charge capacity was 50.8 and 53.9 mAh g⁻¹, respectively. With the increase in polarization rates from 20 to 400 mVs⁻¹, the discharge capacity decreases to 14.6 and 13.3 mAh g⁻¹, and charge capacity decreases to 14.8 and 12.8 mAh g⁻¹, in both NaNO₃ and LiNO₃, respectively.

CONCLUSION

In summary, Na_{0.44}MnO₂ was successful synthesized by glycine-nitrate method and the powder consisted of uniform rod-like particles. The intercalation/deintercalation of lithium and sodium ions in synthesized material were reversible in NaNO₃ and LiNO₃ aqueous electrolyte which indicated that Na_{0.44}MnO₂ synthesized by glycine-nitrate method can be used as the positive material in lithium and sodium aqueous batteries.

Комисија за стицање научних звања је по претходно прибављеном позитивном мишљењу Матичног научног одбора за хемију на седници одржаној 26.03.2014. године разматрала захтев и утврдила да именована испуњава услове из члана 70. став 6. Закона о научноистраживачкој делатности ("Службени гласник Републике Србије", број 110/05 и 50/06 – исправка и 18/10), члана 2. става 1. и 2. тачке 1 – 4.(прилози) и члана 38. Правилника о поступку и начину вредновања и квантитативном исказивању научноистраживачких резултата истраживача ("Службени гласник Републике Србије", број 38/08) за стицање научног звања **Виши научни сарадник**, па је одлучила као у изреци ове одлуке.

Доношењем ове одлуке именована стиче сва права која јој на основу ње по закону припадају.

Одлуку доставити подносиоцу захтева, именованој и архиви Министарства просвете, науке и технолошког развоја у Београду.
